Pre Cast Yard Crew Sets a New Production Record

The Harbor Bridge Project construction experienced tremendous progress throughout February. Much of the coordination efforts began with the production of the 100-ton box girder segments cast at the Pre Cast Yard (PCY) in Robstown. Approximately 1,345 out of 2,600 total segments were cast by the end of the month. The PCY crew reached a milestone goal of casting 24 segments in one week, beating the previous record of 23 segments cast in one week. Congratulations to the PCY team for achieving maximum production output.

Alliance with Project Stakeholders Leads to a Bridge Replacement Project

Not all bridges can be seen from miles away! County Road 36 in Robstown will soon have a new bridge thanks to the City of Robstown, Nueces County Drainage District No. 2, and the Harbor Bridge Project. Our transport team uses the CR 36 route to deliver the 100-ton concrete box girder segments from the Pre Cast Yard to the North and South Approaches of the project. We were pleased to participate in replacing the county bridge by donating and setting 24 – 4’x6’ concrete box culverts, which weigh 16,000 pounds each.

Saturday Sidewalk Talk April 4, 10-11 a.m.
Our Lady Star of the Sea Catholic Church

The public is invited to join us for an informative session featuring the Harbor Bridge Project’s North Approach area and the Launching Gantry Crane. Project engineers and managers will be on hand to discuss the North Approach construction assembly process.
